BARUCH YANKOVITZ

Backend Developer | Node.js, TypeScript & Python
baruchyankovitz@gmail.com | +972 55-678-2035 | LinkedIn | GitHub | Portfolio

SKILLS

Languages: TypeScript, JavaScript, Python, Java
Backend: Node.js, Express, Flask, REST APIs, SSE, Microservices, Event-driven architecture
Databases: MongoDB, PostgreSQL, Prisma, Supabase
Auth & Payments: JWT, role-based access control, Stripe
Integrations: Shopify Admin API, Shopify GraphQL, WhatsApp, third-party APIs
DevOps & Tools: Docker, Kubernetes, Skaffold, NGINX Ingress, Git, GitHub, CI/CD, Postman, Vercel
Testing: Jest, Supertest
AI & Automation: Claude API, OpenAI Whisper, Gemini API, n8n, Playwright, Claude Code
Languages: Hebrew (Native), English (Professional working proficiency)

SUMMARY

Backend-focused developer who builds and owns production systems end to end: APIs, integrations, data models, and automation pipelines. Built a 7-agent AI pipeline in Node.js/TypeScript, REST APIs with JWT auth and Stripe payments, and workflow automations that saved hours of manual work each week. Currently delivering freelance systems for business clients.

EXPERIENCE

Freelance Full Stack & AI Developer | Self-employed *2026–Present*

- Built a BOM and quoting wizard web app for an LED manufacturer (EnoLED), deployed on Vercel, using spec-driven agentic development with Claude Code and iterative QA cycles
- Designing an inventory management system for an NGO: ledger-based domain model (Next.js, TypeScript, Prisma, Supabase) integrated with the client's existing CRM

Full Stack & AI Engineer | Ambientech / Light Story *2025–2026*

- Designed and built a 7-agent AI pipeline in TypeScript/Node.js that automates Facebook ad generation, cutting creation time by 90%
- Built a Python/Flask service integrating the Kling AI API to automate video generation, reducing production from hours to minutes
- Built a WhatsApp task bot (Python, Playwright) for team task management with manager approval, daily check-ins and recurring tasks, saving ~5 hours/week of manual coordination
- Integrated Shopify Admin and GraphQL APIs and payment providers for the company's e-commerce store (100+ products)
- Fixed broken Google Ads conversion tracking, restoring reliable conversion reporting

EDUCATION

Full Stack Development | ORT Singalovski College *2023–2024*

PROJECTS

Beth Israel — Synagogue Management System | *Node.js*, *Express*, *TypeScript*, *MongoDB*, *Stripe*, *JWT*, *Docker* | GitHub

- Built a REST API with role-based authentication (JWT), Stripe payment processing, and Torah-reading management workflows; containerized with Docker

Daily Recorder — AI Transcription System | *Python*, *OpenAI Whisper*, *Claude API*, *Playwright* | GitHub

- Built a macOS daemon that records workday audio, transcribes with Whisper, summarizes with Claude, and auto-delivers the summary via WhatsApp

EveryoneDJ — YouTube Audio Mixer | *TypeScript*, *Node.js*, *Express*, *ffmpeg*, *SSE*, *Docker*

- Built a full-stack app that cuts YouTube audio by timestamps, reorders clips via drag-and-drop, applies crossfades, and merges into MP3, streaming progress to the client with SSE
